## OpenSoundboard

Simple program that makes playing sounds easier - whenever you press hotkeys you hear them. What you hear depends on what you set up. For example when you set the laptop sound as the "master" and the desktop sound as the "slave" you play the laptop sound from the master (on the laptops own soundcard) and the desktop sound on the slave. To be sure your sound is played you can use the volume sliders or the audio mixer. Download OpenSoundBoard: I did a little project for the nazis, asking people to buy an otherwise obsolete keyboard and having it replaced with a keyboard that can be loaded with an apple/microsoft chip and a S.O.T (serial of the things). I did this project on a background that was as funny as if it was the effort of the German concentration camps - with the meaning of the S.O.T. being all the everyday life in the concentration camps. So the nationalsozialistische / facebook-page was available. For the people to see how it was, this attached file contains the video of this project. The S.O.T will be available for requests at a price of 1000 money. The order can be placed on the webpage at [www.sot-muenchen.de](http://www.sot-muenchen.de) I did a little project for the nazis, asking people to buy an otherwise obsolete keyboard and having it replaced with a keyboard that can be loaded with an apple/microsoft chip and a S.O.T (serial of the things). ## What's New In?

- five built-in files containing chords - Hotkeys for playing a set of files sequentially or randomly - ability to drag & drop custom files to the hotkey editor - can be integrated into the game's internal controls - hotkey editor is graphical and can be easily accessed through a menu - hotkeys are displayed in a popup menu when pressing a hotkey - hotkey positions are supported - files can be set to repeat automatically - hotkeys are defined as one-shot-events - hotkeys can be assigned to a prefilled list of chords (default: compiled list of chords) Install: 1. unzip, compile and install via NSIS. You can do this simply by downloading the zipped install file and double clicking it. When you click install, it is necessary to accept the license. If you want to modify the compiled binaries, you can just open the project files and see how it's done. In particular this means that you will not need to unzip the project files in order to change the binaries. This is quite important for "modifying" the compiled binaries. I would not trust your own compiled binaries to do this, because you are not sure if there are compiler warnings in the "original" build and if you forget to check the warnings you can mess up the binaries by simply forgetting the warnings. Why should I compile it myself? Please install it from the zip file because if I use the sample file as install target, the installation gets aborted (probably: "File or directory not found") and there is no way to get around this. Contributors - Martin Bäumer Bug reports and suggestions are welcome. Soundboard contains the "GIGA F-Tasten" files. These are provided as example for the software. When pressing F-6 the file named "F6" will be played and the beep will happen in 0.1 sec. You can also specify the order, which file will be played first. When you press F-5, the file named "F5" will be played and the beep will happen in 0

---

## System Requirements For OpenSoundboard:

Table of Contents 1. Introduction The wait is finally over, it's time for my "Game of Thrones" review. I did a lot of thinking over the summer, but after watching the show I decided that my review will stay spoiler-free. I wanted to go over the good and the bad of the show, the characters and of course the "spoilers" as well. The list may not be exhaustive, but I tried to include everything relevant. 2. Game of Thrones Season 6 The show
