Versions of AutoCAD had been around in various incarnations for years, since at least as early as 1964, and AutoCAD was launched in 1982. Developed by Paul Bilger, the first versions were implemented in AutoLISP, a dialect of the LISP programming language, and graphics could be achieved with the use of the COLOR command. In 1977, Paul Bilger, working at Harvard University, created an on-screen drawing package named ESD (Electronic Slide Deck). ESD was the first-ever non-commercial on-screen drawing package, allowing users to create 2D drawings by writing instructions on paper and then projecting them on a surface. The user could scroll over the screen by touching it or by using a joystick. The user could move the screen around by tilting it. Paul Bilger's first CAD work in the early 1970s was done on an IBM mainframe using Stiffline CAD (the product name was changed to CADpak). By the early 1980s, he began working on a new graphics system he called Hyperline CAD, which would later evolve into AutoLISP, HyperCAD, and AutoCAD. In the 1980s, Bilger and his team developed the HyperLISP programming language. A number of graphics technology companies released products based on the HyperLISP language, including Mentor Graphics. Paul Bilger was an autodidact. He had been designing and producing microprocessors since he was a teenager. He started work on ESD at the age of 18. As a result, he had a deep understanding of how graphics worked, and he was a pioneer in the field of vector graphics and visual data manipulations. When he moved to Harvard University, he began using the university's mainframe computer to create graphics systems and graphics packages. He was one of the inventors of the SIMULA graphics environment, and he also made a few early "computer-aided design" (CAD) packages. In 1977, Paul Bilger developed the first on-screen drawing package. Called ESD (Electronic Slide Deck), this tool was a software-only application that allowed the user to create 2D drawings by writing instructions on paper and then projecting them on a surface. At that time, the boundaries of what was possible on a computer screen were in the early stages of development. By the early 1980s, Autodesk had been formed.
