With DiscoverStation, you can turn one computer into ten - transforming your office desktop into a public computing environment. DiscoverStation is both powerful and easy to install - it takes minutes, and turns any PC into a fully functional public computing environment. Easily provide printed documents, browse the web, and answer to-do list items from your office desk. DiscoverStation installs an advanced, full-featured Linux operating system (Red Hat Enterprise Linux, SuSE Linux Enterprise Desktop, or SUSE Linux Enterprise Server) on your PC, with many of the same features and reliability of our enterprise solutions, such as administrative tools, accounts, printing, backup and restore, and more. Explore the software applications included with DiscoverStation, or browse the Web from within DiscoverStation to surf the Internet on your desk, print documents from any Web browser, and perform administrative tasks to maintain and protect your private information and privacy. DiscoverStation helps users overcome any challenges associated with public computing, including possible computer/Internet crashes, virus infections, and the headaches of constant maintenance and upgrades.

DiscoverStation Features · Create one to ten computers from one computer · Maintain your own private network to use DiscoverStation as a gateway to the Internet · Attach printers to your DiscoverStation · Add applications to your DiscoverStation · Launch Windows programs directly from DiscoverStation · Protect your privacy by hiding or showing your information · Maintain the content on your computers by creating unique user accounts · Monitor the computers on your network · Add administrative tools and features to your DiscoverStation · Protect your network with RBL, DHCP, IPS, NFS, and SNTP · Automate your computers using CLI or Web interfaces · Report users and other statistics and information · Take advantage of the built-in features and add-on programs

DiscoverStation Package Includes: · DiscoverStation Software · Red Hat Enterprise Linux, SuSE Linux Enterprise Desktop, or SUSE Linux Enterprise Server · 32-bit or 64-bit versions of Red Hat Enterprise Linux, SuSE Linux Enterprise Desktop, or SUSE Linux Enterprise Server · Standard CDs (red, white or black) · Installation CD · User Guide · FAQ

DiscoverStation Upgrade: DiscoverStation can be upgraded from DiscoverStation V2.6 and later. The upgrade cost includes two DiscoverStation licenses (License 1 and License 2) for the same price as one DiscoverStation license (License 3). Each DiscoverStation license includes one computer (each computer may be upgraded separately).

DiscoverStation

Kernel Macro provides the simplicity and power of macro scripting, but adds user interface flexibility. With Kernel Macro, you can perform all the same tasks as with a native script, plus a lot more. Kernel Macro allows you to script virtually any Windows task in a standalone, portable, scriptable scripting language, eliminating the need for heavy-weight programming languages such as JScript and Visual Basic. The scripting language features advanced syntax, and each statement can be invoked independently from other statements. The user interface allows you to customize the interface to suit the task, making Kernel Macro the easiest way to script Windows tasks. Kernel Macro is a developer version of Macro Commander, which is available as freeware from KLA. You can drag macros into Kernel Macro from Macro Commander or create your own.

Features: · Simple scripting language with advanced syntax · Can perform the same functions as a native script · Ability to name individual statements · Interface is customizable · Include user-friendly keyboard shortcuts · Run in the background · Runs completely independent of a scripting application

Limitations: · Must be run as a system service

License: Freeware version is available as a demo

Price: \$29.95

Summary: The excellent GroupWise version 8.0, built on the open source PHP technology called Mercury. It is one of the few email clients that is both a great looking, and an excellent performing email client. The Mercury technology allows GroupWise 8 to be distributed as a single Microsoft Installer package, which means you can have no other Windows applications or services running on your system, without the risk of locking up your server. It's an important feature of the Mercury platform. It allows GroupWise to be very dependable, while at the same time being extremely fast, and very stable, I have not had one crash over the past 8 months. (As far as I know, our GroupWise 8 server is the only production system to run for over a year without a crash). My only complain is that the "Save As" function does not store the attachment and send the email with the attachment as a mail message, but sends a copy of the attachment in the body of the message. The GroupWise version 7 save as feature, worked perfectly, and allowed for the attachment to be sent as the body of the message. This would
