developed in LatviaQ: How to fix
EXC_BAD_ACCESS on an unnamed object? I'm
debugging a crash, and I've isolated the line of code

that I'm sure is causing the crash, as it crashes only when the currently selected item in my UIPickerView is changed. The crash is occurring because the data that I'm returning to the UIPickerViewDelegate is actually nil. Why is this happening and is there a fix? I've set a breakpoint on the dealloc of my viewcontroller to confirm that the viewcontroller is being released properly, and it is, but since the crash occurs I'm not entirely sure why. edit* here is the full exception

Thread 1: EXC_BAD_ACCESS (code=2 address=0x0)
