DriveSight Crack Activation Code With Keygen [Latest]

2.5GB DriveSight Crack is a useful tool designed to assist the SharePoint community in analyzing file shares which may be uploaded into, or indexed by, SharePoint. We recognize that not all enterprise file shares are created equal - some primarily contain gigabytes of archived office documents, while others may act as a repository for all sorts of files - drawings, images, executables, videos, etc. In order to configure SharePoint to house or index this content, it's important to understand the data. How much can actually be indexed? How much can actually be uploaded? These are the types of questions that DriveSight can help you answer. We hope you find it as useful as we do! Get DriveSight and take it for a test drive to fully assess its capabilities! DriveSight Description: 20.1MB DriveSight is a useful tool designed to assist the SharePoint community in analyzing file shares which may be uploaded into, or indexed by, SharePoint. DriveSight Free License Key

DriveSight is a useful tool designed to assist the SharePoint community in analyzing file shares which may be uploaded into, or indexed by, SharePoint. With DriveSight you can: Create indexes for SharePoint (concurrently), in a specified folder, against a specified content type, and populate them, as well as upload a document, to a specified SharePoint folder. You can also analyze all the files within a SharePoint document library and create a custom report out of them. Features: * Upload individual files, batch files, folder and disk copies (zip files). * Analyze the contents of the file shares (uploaded or indexed) to generate detailed reports that can be exported to CSV and PDF formats. * Import and export data to and from custom databases. * Let you target your data in SharePoint document libraries, lists, libraries, folders, and created with our unique types of sources (Excel, SQL, CSV, whatever). * You can create queries on the content of your file shares (targeted in the file shares) to report on it. * Help you index and upload data to the content of your SharePoint document libraries. * Create a custom report from the file shares on your file shares. * Create a query for your SharePoint (of files) and target a custom report out of it. * Combine data from your file shares in your SharePoint databases. * Quickly target your file shares data into your SharePoint databases. * Create a custom report from the content of your file shares. * Create a custom report from the content of your SharePoint (targeted by the indexes). * Save your file shares index into a SQL Server. * Export your indexes into a SQL Server. * Create a customized XML file for SharePoint. * Target your index data in a SQL Server. * Create a custom report from the index data in your SQL Server. * Generate a report from your SQL Server indexes by specifying them in the report. You will love the ease of using DriveSight to index your content and create an impressive custom report that will quickly be shared with your business, colleagues and other users. Pricing is on a one-off basis and is a one time fee. There are no yearly, recurring or ongoing fees. Our plans start at \$4,000 a year. We will provide you with a 30-day free trial for the first time you 09e8f5149f

DriveSight Crack Product Key Full

DriveSight is a command line utility designed to take a SharePoint defined list of file shares which are uploaded into SharePoint and index the files contained in the file shares. What makes DriveSight different from the standard SharePoint tools like Search is that DriveSight is designed to look at more than just files. By using the information contained in the file shares, it can also analyze their permissions (who the files are accessible to), who has access to the files, where the data is stored, and even if the files are in offline mode. DriveSight will create an accurate report of what's actually stored on the file shares and provide you with a comprehensive inventory which can be used to determine what you actually need stored on the file shares or if you should be looking into alternatives to store the data in SharePoint. You can also view the detailed report by logging into SharePoint using a SharePoint Administrator account and navigating to your document library or site collection. You can upload a list of file shares to be analyzed to a CSV file then launch DriveSight from the command line using a simple shell script. This allows you to automate the process of analyzing hundreds or thousands of file shares all at once without having to install anything on your SharePoint server. There is also the option to use the SharePoint managed account and perform this analysis from the GUI but for those who are not comfortable with the GUI interface, using the command line tool is more comfortable. Getting Started: Download the latest version of DriveSight from Github and unzip it: The latest version of DriveSight comes with two files which need to be uploaded to your SharePoint site: 1. DriveSight.ps1 - This file is required to install DriveSight on your SharePoint server 2. SptShellTools.zip - This file contains the Shell Command functionality that DriveSight requires to perform the analysis Run the following PowerShell script: [string] \$share = "\\server1\file_shares\file_shares" [string] \$site = "" (Get-SPShellAdmin).ConnectPSSession(\$share,\$site) & "\\server2\share\SharePointSite_Test\Scripts\SptShellTools.ps1 -share \$share -site \$site" &
