SyncThru Web Admin Service for CLX-3175FN Download Please download the SyncThru Web Admin Service for CLX-3175FN through my website at As the business world becomes increasingly virtualized, the private sector is moving toward virtual desktop computing (VDC) in order to provide an inexpensive and flexible infrastructure for remote users to access their desktop, database, and application software. Security remains the single greatest hurdle for large-scale deployment of VDC. Many users still don't understand that VDC is also a security issue. The top threat to VDC is the misuse of session delegation, which is an undesired consequence of the implementation of VDC. A

What's New In?

The SyncThru Web Admin Service (WSAS) for CLX-3175FN allows you to perform management operations on the SyncThru Web Service in cluster mode. This WSAS does not support the discovery functionality of the SyncThru Web Service. SyncThru WSAS is an SNMP interface that shows and enables the following services: * Server listening for SNMP requests from remote devices * Graphical programing interface (Web-GUI) to verify, configure, and manage the server * Console programing interface (CLX-GUI) to perform SNMP-compliant management operations on the server, such as reporting, SNMP traps, logging, and alarming For more information, go to the following: SyncThru WSAS for CLX-3175FN Options: * INBAND or OUTBAND: selects between “inband” and “outband” configurability. A SyncThru WSAS is designed to be configurable and secure. When you enable outband configuration, the SyncThru WSAS server(s) have their SNMP community credentials. The usage of such SNMP community credentials is limited. The connection between the SyncThru WSAS client and the SyncThru WSAS server is limited to 500 messages per second. In inband configuration, when you perform SNMP operations, the SyncThru WSAS client has its SNMP community credentials. The usage of such SNMP community credentials is permitted. The SyncThru WSAS is configurable, and the configuration is defined in the SyncThru WSAS server. For example, you can set the high port number, or the internal IP address for the SyncThru WSAS server. You can also specify the IP address used by the SyncThru WSAS client. When you configure the SyncThru WSAS by using the SyncThru WSAS Console program, you can change the settings, and you can reset the settings for the SyncThru WSAS, easily. The SyncThru WSAS Console program provides the console support for SyncThru WSAS and supports the following Windows operating system configurations: Microsoft Windows 2000 Professional Microsoft Windows XP Professional Microsoft Windows Server 2003 Enterprise Edition At Koodo, with the Samsung SyncThru CLX-3175FN, we can manage all the devices in the

System Requirements:
