Keyshot is a very powerful, but also powerful extension for 3DSMax. It is a plugin that improves rendering and is a very useful tool for many 3D designers. It has become even more powerful in 3DSMax 2018. The plugin works with Chrome, Firefox and Safari browsers and is integrated in Max's interface. Besides these options, you can also use KeyShot as a standalone application. The main panel on the left of the interface shows previews of all the objects you have created and their materials, while the other panels and

windows allow you to assign materials to selected objects or to the entire scene. You can view a list of all the objects in the scene by pressing the O key. You may also use the F11 key to toggle on/off the transparency of the objects. To access the various tabs, you can use the keys W, A, S, D or M. Keyshot offers a great feature set. You can use it to perform a wide variety of tasks: from adding lighting effects to preparing a scene for rendering. It also offers a powerful node-based workflow where you can easily define how your object is displayed in the preview or how it's rendered. And because it is a plugin for 3DSMax, it is compatible with all 3DSMax versions from 2015 and onwards. By all accounts, Blue Bell just 1d6a3396d6
