Nevertheless it is a complex game. The complexity is higher for the 3D version. To play the 3D version a couple of approaches are possible. The first one is to use a mouse or a controller like a mouse with 3D chess navigation or a gamepad. For each chess piece a tiny 3D model is shown in the three-dimensional chessboard. A chess piece can be dragged to any place of the board. The entire chess board has a special navigation. The other way is to use a special chessboard that shows the 3D objects. The 3D object board is a special chessboard where the 3D chess pieces are shown on the 3D objects. They are manipulated like the normal pieces on a regular chessboard. The entire chess board is a special navigation. The 3D chessboard allows to navigate and drag the pieces to different places. 3D navigation works like a standard mouse. Pressing the mouse button moves the chess piece. Pushing the mouse button with the thumb moves the piece up and releasing moves the piece down. The chess pieces are not shown in their normal colors but in a unique color that is determined by the piece. Some pieces are also selected by color. Similar to the normal 3D chessboard pieces can be swapped and the 3D objects can be moved to new places. They also have special effects that are shown as a 3D animation. An effect can be selected by pressing a button. A couple of 3D objects can also be grouped together to form a block. A block can be dragged around to new places of the 3D object board. How to play the 3D chess version of 3D chess. The three-dimensional chess game is played as a normal chess game. As in normal three-dimensional chess the pieces are placed on a regular three-dimensional
