It is currently over 10 years old and is still running fine but it has some massive bloat that I need to clean up and remove. I have already written a number of .NET components that are used in this application so I am not new to .NET but this app is a lot bigger than anything I have written before. What is the best approach to convert this app to C#? A: I used to use Visual FoxPro. It's a slow language with an interface similar to VB. It's also free, very powerful and customizable. Last year, the club hit a massive low, putting the organization on life support and instilling many fans with a sense of dread. This summer, they have gone the opposite route. The Jets have done their best to make moves that improve their future. The team acquired Nikolaj Ehlers and Tyler Myers, had a franchise goalie go down and lost Paul Stastny to free agency. This season, the club added free-agent forward Troy Brouwer and defenceman Brendan Smith. The future is looking bright and the season is underway, so let's dive in and take a look at five things the Jets are doing in the offseason to make their future look brighter. 1. Giving fans something to cheer about The Jets are taking a more traditional approach to creating excitement at MTS Centre. Back in the day, this team did things a little differently, such as instilling dread in the hearts of Winnipeg hockey fans and embracing a downright incompetent brand of play. The team was fun, exciting and certainly put the area on the NHL map in the 1980s and 90s. Unfortunately, over the years, it started to lose the love of the fans. The Jets have taken steps to reconnect with the city's hockey fans by adding colour to the arena, bringing in some new music and food trucks and revamping the entrance to the building. The club is taking pride in having fans want to come back to the rink, so they can create a brand of hockey that will get fans excited again. 2. Reinventing a tired team In today's NHL, the Jets would be considered middle of the pack. They have a roster that is very average. They are made up of depth players with a good mix of talent and unproven youth. You could add Troy Brouwer to that mix and the Jets still wouldn't be considered one of the top teams in the league. A team can only be considered as good as the top players, and there are a handful of solid, young talent in the NHL. If we are looking at this team with a lack of high-end talent, it is time to build on the talent that does exist. This Jets team is not going to be a contender, but they have the talent and depth to be competitive and fun to watch. They are no longer a doormat and are a team to be excited about. 3. Positioning themselves for a run at the
