Such a conventional filter system is shown in FIGS. 3 and 4, in which FIG. 3 is a front view of the conventional filter system while FIG. 4 is a side view of the conventional filter system. In these figures, reference numeral 21 denotes a filter case, and reference numerals 22, 23 and 24 denote first, second and third holders respectively. These holders 22, 23 and 24 are formed as round members and have respective flanges on their inner circumferential surfaces. The first holder 22 is formed with a groove 22a extending through it in an axial direction, and the second holder 23 is formed with a hook-shaped cut 22b extending through it in an axial direction. The first holder 22 has a first flange 22d on a side located opposite to the groove 22a. On the other hand, the second holder 23 has a second flange 23d on a side located opposite to the hook-shaped cut 22b. A filter element 25 is accommodated in the groove 22a of 77a5ca646e
