Extract the ac3 stream from a vob - Split the whole vob file into a smaller stream. There are several streams within a single file. - You can call this Chapter splitter or what ever you want. This function is ment to solve many problems with sync issues. 1) Whats the difference between a HDTV/DVD rip and a normal rip, my friends (forgot to explain it, sorry) 2) How can you change the setting that "the max episode length of a title is x time longer" 3) I notice that the ripped movies sometimes are a bit different than what they are on the DVD (too much jittering/squeaking) but the.avi version is fine. Is there a way to fix that? 4) Is there a way to extract the subtitles? 5) How can I extract the mpeg audio files? "The max episode length of a title is x time longer" Set the value in the database. "how can you change the setting that "the max episode length of a title is x time longer" To create the database, go to options/advanced. The database stores the list of titles. It is updated every time the show list is updated. You can extend the database by the vobdb tool. "how can you change the setting that "the max episode length of a title is x time longer" To create

- By combining the following functions you can split the whole video into smaller chunks to solve sync issues. This helps when you wish to extract an ac3 stream from a video, but you don't want the whole file to extract. - This function will split the file into two parts: 1.0 and 1.1. It's up to you to decide

which one will be the cut off part. For Example: if you want to split vob_file.vob into vob_file.vob.0 and vob_file.vob.1 the code would be something like this: mpg123_file = mpg123_file + ".0" mpg123_file = mpg123_file + ".1" Split_Vob(vob_file, mpg123_file) NOTE: This is very dangerous, the result depends on how the.0/.1 files are named, so make sure to change that if you don't want to ruin your files. - in the following code will take the source file and the destination file and search for the.mpg extension, and if it finds one, it will append the extension. - This will create a new vob file with the extension.0 and.1 - If you don't want it to get messed up you can use another utility to split the file. - If you have too much problems with sync issues, you can split the vob into several smaller chunks and extract the ac3 streams. - This will split the.0/.1 files into smaller chunks. - The.0/.1 file will have the extension.mpg (without the.0 and.1) - The.0/.1.mpg files will be the ones you want to extract, so make sure you have that as the destination. - Since the.mpg files are smaller in size, and since the.0 and.1 files are from the same source, it should be okay to mix the different sizes. - The stream will also be extracted. Split_Vob(vob_file, mpg123_file) First, this function will open the source file, and will check if there are any.mpg files. - If there is no.mpg file, then this function will add the.0 and.1 extensions to the source file and then it will return the results. - 1a22cd4221

=====

===== The Mpeg Utils is a small utility that help the user move/edit/create/modify vob files. This program uses some features of ffmpeg. NOTE: I have NOT compiled the program. If you do then I suggest you to use the latest versions of ffmpeg and ffmpeg-devel packages. The problem is that the ffmpeg developers don't support the latest features of the ffmpeg library. Why use this program? There are many vob files available on the internet. Many of these files is damaged or what ever. Therefore it is possible to extract the ac3 stream from the damaged vob files and re-create these files. In some cases it is just not possible to convert a vob. When this is the case you can use the Mpeg Utils application to edit the damage vob files. Using this program can be beneficial for following reasons: - You can extract the ac3 stream from a damaged vob - You can convert the damaged vob into a working and perfect vob - You can split the damaged vob into several smaller streams. The Mpeg Utils can solve many problems with sync issues. The sync issues are simply something with the clock or the time. Structure =
