KEYMACRO is a program that allows you to edit your keyboard keys so that you can configure them as shortcuts for working with your photos. It has a Windows interface, which is perfect for most users, but it also works on OS X, and is available for both 32-bit and 64-bit versions of the operating system. Just click on the link below and download the software for Windows, or make sure that you have at least Photoshop or a similar program available if you're using OS X. Then open the program and you'll be able to use its keyboard and mouse shortcuts to configure your keyboard to work like a light table. Next to your computer, you will find a keyboard that is specific for this purpose, and you can use it to place the cursor in the right place, drag the selected areas of your photos around or copy and paste the information from one photo to another. Why should you download this software? The basic version of the KEYMACRO keyboard is available for a very low price, and if you don't have the need to be as fast as possible in your work, then it will do you well enough. There are many options to personalize your keyboard so that you can use it like a light table, and you can also save your configuration, so that you don't need to spend as much time when using the keyboard. If you want to be able to use this software for a more complex editing process, however, then you will need a higher priced version that includes additional keyboard layouts, shortcuts and customizations. #2 FullLight This is probably one of the most useful software products I have ever used. This program is designed for use with FullLight, a program that is specifically designed to optimize your photos. You'll want to take a look at the section below that discusses that program. #3 Illustratex Virtual Light Table You don't need to buy this software if you already have the most recent version of Photoshop. You can use this software to create your own light table, and it's available on both the Mac and the PC versions of Photoshop. This is probably the closest you can get to actually using a light table for your photos, but if you're looking for a more cost-effective option, then you should go with the FullLight software, which is the lightest of the three. #4 LightTable This is
