ligand \*C. albicans\* is recognized by the receptor Dectin-1. Dectin-1 is a member of the CLR (C-type lectin receptor) family.  
Pathogen recognition via these receptors by the host cells is essential for host defense against fungal infections

How do I access Git on an Amazon AWS instance? A: It depends on your access control: If you access the instance with (as root) SSH key authentication you have to connect to `ssh://user@ip:22/` If you connect with a user/passwd the instance asks you about this during first login to this user. You'll be assigned to a specific project, where you can clone the repository in your own account (assuming it's configured to allow you to do so). But wait, if you have configured the AWS instance to allow git access, why can't you open the Git console? I'm not sure if this is related, but when I try to connect via SSH I am asked for a password.
