A new version of Paint! It's all the stuff we have come to expect from Paint in Windows Vista and Windows 7 and more. I have a long-standing obsession with drawing diagrams, so I had to share some information about the latest version. Creating a new diagram To create a new diagram, select New > Diagram. This brings up a dialog that has several different types of diagrams to choose from. For our purposes, we will be using a diagram that is known as a flowchart. A flowchart is essentially a series of boxes (representing a series of choices) that are connected by lines. The lines are there to represent the paths that a computer would take if it were making a series of choices. By default, there are a couple of boxes available. If you want to place a single box, select Add rectangle. If you want to add more than one, select Add rectangles. We want to place this box on a white background, so click Background and choose white as the color. Then click and hold to select the box, and drag it to the desired location. The boxes and lines of the diagram should look like the one below. After you have drawn your diagram, the next step is to add some text. Clicking and dragging to place the text box and then typing some text. The size and placement of the text is completely up to you, as long as it's on top of the box. After you are happy with your text, you can click any box or line and it will turn blue. Clicking on the boxes removes them from the diagram. Clicking on a line closes it. When you are ready to see your final work, you can save it to your computer. You can find the file on your computer by opening Windows Explorer, finding your Documents folder, and navigating to it. You will find a file named Paint

The extension does not modify the clipboard but just converts it into a plain text. It can be used with the application macros and the CSPackage macros. Keyboard Macro Extension is based on Keymapplus, a keystroke recording utility that has been widely used by Kinesis for many years. Kinesis is a pioneer in the field of software keyboards and is the sole publisher of the Keymapplus product. The extension installs a shortcut to the application or a CSPackage on the Start menu and it enables the user to simply press the shortcut key (or any other key) to invoke a macro. Keyboard Macro Extension comes with a companion registry tweak (if not already installed on your computer) to enable Key Macro Extension to work with multiple applications and virtual consoles. The File Versioning and Content Indexing features in XP can be used to enable full control over what file system operations and users can do to the files and folders.
