## One Piece 3d Gekisou Trap Coaster Hit

It revolves around straws being attacked by marines and going through some weird layered coral stuff and traps, from arrows to baseball marines (LAW). I wonder how he did it. If I use one component and the other component is a "disabled component", how do I create that? Should I have two components, each with a class that can be connected to the other, or do I need to have two components that can be connected to each other? How to connect two components? Could you explain this for me please? I mean, is there any mechanism or way you could do this for me?
