The tool gives you the possibility to zoom in or out of the generated analysis, increase or decrease DPI, set system DPI, reset the current view, as well as show or hide legend and annotation. What's more, you are allowed to copy the image to the clipboard so you can easily transfer data into other third-party utilities, export the photo to BMP, PNG or SVG file format, and view information about the current file, such as length, samples, sample rate, bits per sample, and channels.
