## KeyMan For PC

KeyMan is the most advanced solution for managing certificate and certificate revocation lists (CRL) for Windows clients as well as Smart Cards. In addition to the standard certification path management KeyMan provides complete and flexible configuration support for subject and issuer alternative names, cross-certification and Fax/PDF integration. KeyMan enables the transport of PKCS #10 and X.509 certificates and their associated CRLs to Windows clients via in-memory serialization of the X.509 structures. CRLs are supported in two formats, the X.509 format and C-based format. PKCS #7 archives support included in the package allow for easy import and export of arbitrary PKCS #7 messages. KeyMan can be used as a PKCS #7 Import/Export driver. The included PKCS #7 Import/Export provider module allows for conversion of PKCS #7 to X.509 certificates, certificate authority certificates and CRLs. KeyMan supports Smart Cards and Windows SCAPI and provides smart card-based certification path management. PKCS #10, PKCS #7, X.509 and Cross Certificates can be converted to PKCS #10 for Smart Cards and certificates can be generated in Smart Card Certificates format for storing in Smart Card certificates. KeyMan provides PKCS #11 backends and provides import and export of key, certificate, and CRL objects to PKCS #11. KeyMan allows configuration of certificate revocations through LDAP and HTTP protocols and supports managing CRLs over all of the above protocols. The LDAP and HTTP protocol support is done by using the native LDAP and HTTP providers with minimal configuration changes to support the new protocol. KeyMan can be used as a LDAP client and a LDAP server, and supports LDAP v2.0. KeyMan can be configured to read and write LDAP attributes for LDAP object classes. It supports any number of LDAP servers on separate network segments. LDAP attributes can be configured for LDAP object classes. KeyMan provides the ability to configure and manage protocols through a configuration panel. Certificate and Certificate Revocation Lists can be imported and exported in a variety of formats as described in the format documentation. KeyMan provides PKCS #12 support and can export keys and certificates to PKCS #12, and provide a graphical interface. KeyMan provides support for Windows virtual token readers. Certificates and CRL can be imported to a virtual token. KeyMan
