Atalasoftware DotImage is a .NET imaging SDK designed to provide you with a simple solution for including document viewing capabilities to your applications. The application allows you to view, annotate, scan PDFs, read barcodes, as well as convert images in any .NET application. The following features are included: Color for both grayscale and RGB PDF documents Image Segmentation (for text, objects and geometrical shapes) High quality JPEG, TIFF, PNG, GIF, BMP, CR2 and PSD image conversion Scale image, adjust brightness, contrast and gamma Rotate image 90, 180 or 270 degrees Apply or remove custom user defined effects to images Customize image borders (multipart JPEGs are supported) The library uses libImageMagick 6.4.9 or higher to read and convert images. PDF documents are read as images and segmented into text and other objects before conversion into any format. If you have color PDFs, they are read as grayscale before conversion. If you have images, the images are also read as grayscale for conversion. If you have embedded images in PDFs, the embedded images are also read as grayscale and converted. The library is multi-threaded and supports pdf documents of any size. The Atalasoftware DotImage control is available for VCL, MFC, MS Windows, .NET, Silverlight, WPF and Xamarin platforms. The standalone executables are about 5MB in size. You can use the control in your source code by adding the following: Project -> Add reference -> Atalasoftware DotImage The DLL files for the control is available for all platforms. The image conversion and scaling tools work with PDF and JPEG images. The library supports both Win32 and 64 bit .NET. The library's source code is available on Atalasoftware DotImage was inspired by the open source ZPDF library which can also be used for reading PDF documents and converting them to any image format.
