She got her B.S. in Computer Science but your guess is as good as hers on what she really does for a living. While she enjoys covering Windows and PC hardware, she's also got a soft spot for Linux and open source in general. She's the resident news hound for ZDNet and TechRepublic and has been all over the map as a reporter, covering hardware, science, and survival and treatment of maxillary ameloblastoma: a retrospective review. Ameloblastoma (AM) is a rare disease that can extend into and invade adjacent structures such as bone, tendon, muscle, and nerves. The purpose of this study was to identify the survival rate and clinical features of maxillary AM. The authors retrospectively reviewed the medical and pathological records of 54 patients treated for maxillary AM and who were followed-up for at least 1 year after their diagnoses. The patients included 36 men and 18 women. The median age was 42.5 years, with a range of 15 to 72 years. The mean follow-up period was 89.8 months (median, 86.9 months; range, 1 to 243 months). The 5-year disease-specific survival rates for patients with or without metastasis were 92.6% and 83.7% (P = .224), respectively. Radical resection without metastasis and subtotal resection of the tumor was the key treatment for AM. Partial resection was performed for small ameloblastomas, but recurrence was rare. The cases with metastasis at the time of diagnosis and incomplete excision tended to recur, and eventually death was imminent. The results of this study have contributed to understanding of the outcomes of patients with maxillary AM and provide a basis for the planning of clinical treatment. An Amazon best-seller is the 19th-century collection of letters and diaries, Winston Churchill's "Toast and Trash", a hilarious source of anecdotes about the author's long tenure as a Conservative MP. After an input causes a state change, which state is re-used in a next fuzz iteration. This can help finding more counter-intuitive bugs. One example: if you have to write a C++ comment for an IF statement, you might consider to not write a C++ comment, if you are not sure what happens if you write a C++ comment, but rather start the next fuzz iteration with the state after the last iteration and assume that you wrote a C++ comment for the IF statement. The paper describes this behavior as stateful fuzzing and has been created by Sang Hyeon Kim.Q: In the Ubuntu hardware drivers page, is there any way to remove devices that aren't responding to connection attempts? So, in the System Settings > Software & Updates > Additional Drivers, I have an entry with the "No propriety drivers are in use on this system." message, and a working entry for the device I need to use to connect to my ethernet cord. However, the device to which it's connected for ethernet connection is displayed on its own entry in the System Settings > Network > Wired Network. The device won't recognize anything other than ethernet as a network, while my device can connect to any wireless network available, so I can only assume that the device's ethernet port is broken. I'm guessing that since the hardware drivers page is saying that they're not even
