Photoshop Express In 2013, Adobe launched the online photo-editing tool, Photoshop Express, at adobe.com/photonews.

Photoshop Express is a free online photo-editing tool that enables you to make basic editing changes to your images. For example, you can crop photos, rotate pictures, create vertical and horizontal panoramas, edit photos with a black-and-white filter, use a blur filter, and retouch things like facial blemishes, scars, and skin tone. The editing tools enable you to quickly create basic edits and even output your photos as digital photo books, tints, and jpegs. However, the editing tools of Photoshop Express are no match for professional desktop photo-editing software, such as Photoshop.

So much so that even a tiny little side project at first was quickly overshadowed by a \$15M effort to solve a seemingly solvable problem!... I also liked the fact that the Product Hunt post came straight out of their internal engineering chat, with a comment from the team's lead engineer (Cain Kassir), saying "Hey, @nate", who in turn sent a push notification to the whole team — a great approach to build strong internal

What's New in the?

The invention relates to the field of medication delivery systems and in particular, to a system and method for more readily delivering pills. In the last few years, medications have become an increasingly important component of daily life. Many people take multiple medications each day and even more can be seen taking medications several times a day. Medication compliance, then, becomes a critical factor in the overall health and well being of an individual. For an individual who is elderly, frail, or has a health condition, compliance with medication schedules can be even more of an issue. The ability to administer a person's medication schedule in a safe and convenient manner can have a profound effect on the compliance of that person. Under current practices, administering a person's medication schedule requires time-consuming pre-planning. Typically, a consumer must visit the doctor, request a medication schedule, and make a note of that schedule somewhere for himself or herself. Most often, that reminder is placed in a place that is accessible to others or uses materials that are not easily misplaced. In another example, a consumer may order his or her medication from the Internet, usually by using a prescription dispensing service. That service will send a letter in the mail to a doctor, pharmacy, or other entity for that person. However, it is not always clear to a person who is not familiar with the medication delivery system what schedule is to be followed and when. The letter sent to a doctor or pharmacy by a prescription delivery service, for example, may include a brief description of the medication schedule, a document that the consumer is instructed to follow, or at best, the provision of the medication schedule for that day, e.g. a dosage for a morning or evening dose. Given the variability of prescription schedules, consumers may not find it clear which schedule they should follow. Moreover, the return letter is often not clear as to whether it should be returned to the service. Furthermore, because the provider of the medication schedule and/or prescription service must provide the letter to a doctor, pharmacy or other entity (e.g., a drugstore) in a timely fashion, any changes to that schedule in the future are not readily made. For these reasons, in many cases the consumer does not adhere to the medication schedule as provided, or at least not as closely as it might be adhered to if he or she had ready access to the medication schedule. In one case, the consumer typically has a calendar in which the days of the week are
