

"This is the most realistic football simulation in the world," said Executive Producer and FIFA lead producer Fabio Guaglione. "We have pushed the boundaries of technology in order to achieve a more in-depth, realistic experience and to allow players to create their own football stories." The effect of the new simulation is clear from the very first moment. Players and spectators watching the game can see players react to the ball and its trajectory on a level never seen before in a football simulation. The HyperMotion technology also helps to make every tackle an aggressive, forceful action, true to real life. Every aspect of the game, from player movements to goalie reactions, has been significantly improved. The unseen level of realism is even more apparent when compared to last year's FIFA 21. The improvements made include: Improved Line of Sight (LOS) Model The LOS model used in FIFA 21 allows players to effectively see targets on the pitch. The LOS is crucial for creating skilled shots, and it now moves more realistically compared to last year. Players will see clear and distinct images of the entire goal box, including more distinctly delineated goal-line for goalkeepers. When players have a larger area of vision, they will be more accurate at judging the ball's trajectory as well as providing more time and space to process the ball and prepare for attacking moves. Improved Player Physics For FIFA 21, the aim was to maintain a play-like feel while still reflecting real-life patterns of movement. The new player model is much more flexible, compared to last year's rigid, body-conforming model. This year, the player controls can be more subtly influenced by the physics of the gameplay. Smooth Camera Movement The camera movement in FIFA 21 is more deliberate, providing a higher level of control that will create a more immersive experience. The camera can be adjusted more quickly, and players will know where the camera will zoom in and out. Angular Movement One of the biggest steps forward in FIFA 21 comes through the new Angular Movement. The new model allows players to make more angular movements with the ball. A player will have the ability to make turns and more agile movement with the ball. In actual-time game play, it will feel more authentic to see players spin-turn into a wide left footed shot to the top corner. Players can also see more dynamic control moves as they

Features Key:

- The Journey Begins - Become the ultimate football manager with an unprecedented level of skill and game immersion, featuring innovative game modes and a lifelike World Tournament mode
- New Jumping & Goal Animation - We've taken player animation to the next level in FIFA. Players are now able to move around the pitch with more agility, which gives the players more individuality. As well as being able to attack with more intensity, you can also push off the ball and reverse direction at a quicker pace, creating the highest-friction and most immersive game experience yet
- Unprecedented Simulation - As well as being able to manage your club's destiny, our new Player Modeling Suite now allows players to be recreated in an almost photo-realistic way. This provides you with a tool to closely replicate and test your favourite players on camera, as well as providing new visualization data for your analysis and assessments in game
- Real Player Interactions - Manage your team's progression by making tactical calls, communicating with players on pitch and in the stands, purchasing and selling players on the transfer market and more - similar to how players actually communicate in real matches. And with full 360 cameras on stadiums, you're able to monitor all aspects of your team and your environment, and make more informed decisions on the pitch
- Human Intelligence - Player reading, psychology, opponents and training feedback that influence game results - based upon real-world data from a professional football club
- Weather & Lighting - Matchday conditions changes dynamically based upon time of day and weather, impacting player creativity and playing conditions. Manage the pregame team spirit with dynamic crowd reactions
- Player Style & Pace - Utilize the new "Immersion Match" and "Prediction Match" features to change your game tactics on the fly, and complement your game planning to change the pace of play, as well as test different styles or tactics in the new "Skill Match" feature. Define your preferred formation and go on the attack or counter quickly with the use of Quick Match.
- Dynamic Team & Stadium Atmosphere - Detailed stadiums, each updated to reflect the respective franchise's team strategy, feature improvements that create a refreshing experience between match days. Players broadcast their team-leading stats and helpful cues in-stadium, as
