A schematic on each transmit/receive pin diagram of the EP-703 in FigureÂ .Q: Resize the size of the legend generated from plt.legend() I am using plt.legend() to generate a legend. I would like to change the size of the border of the legend, but I don't know how to do it. plt.legend(loc='upper right', prop={'size': 50}) A: Just pass size argument as list as given below. import

matplotlib.pyplot as plt x = np.linspace(0, 10) y = np.sin(x) plt.plot(x, y) plt.legend(loc='upper right', prop={'size': [0.5, 0.5]}) plt.show() Q: How to refer to multiple structs in one struct initializer expression Let's say I have several structs like this var x = getXStruct() var y = getYStruct() var z = getZStruct() and I have a struct that I would like to initialise like this var question = { x: getXStruct(), y: getYStruct(), z: getZStruct(), } I understand that the accepted answer to this question involves using tuples as immutable types. But I wasn't able to get that to work with my situation. How can I achieve my goal? A: Use || to create a tuple if the first element is given a value or with {} if not. In your example, that would give you: var question = { x: getXStruct() || {}, y: getYStruct() || {}, z: getZStruct() || {}, } You might want to get rid of || if you want an empty object if the getXStruct() call fails. Pablo Iglesias firma acuerdo con Podemos para que Ciudadanos se sume a su candidatura para

las próximas elecciones del 26M. EL PAÍS Mixto Pablo Iglesias y Albert Rivera firmaron un acuerdo para que Ciudad
