iGrid software is a kind of grid for drawing all kind of illustration, from regular Orthogonal, linear and diagonal lines to irregular, freehand lines. However, iGrid software is versatile grid, so you can use it as a tool for drawing, education, art or

even as a simple test for mathematics. To generate the grid, you can use any drawing or illustration program. iGrid will then plot grid over the entire drawing and you can move it around, zoom in/out, rotate it, add/remove it easily and change grids settings.

Freehand lines: Freehand lines are plotted using the mouse.

These lines are plotted over the grid previously generated. You can draw lines of any length, and you can delete lines, connecting points, or add new ones. Orthogonal lines: Orthogonal lines are plotted by default. You can move, zoom in and out, rotate the grid and change the grid type, line thickness, line color,
