So enjoy the movies of your choice full. The present invention relates generally to a shift controller or controller for use with a transmission of a vehicle and more particularly to a shift controller for use with a transmission of a vehicle that includes an electronic control unit (ECU) that acts as a master control of a shift control system and an individual (ISO) shift control module that is independent of the master control system. Vehicles such as automobiles include many types of transmissions. For example, some vehicle transmissions include a manual transmission, a continuously variable transmission (CVT) and a semi-automatic transmission. The drive train of the vehicle communicates rotational forces from the engine and power is transmitted to drive wheels of the vehicle. In typical prior art transmissions, the drive train of the vehicle includes a clutch and a release clutch for mechanically coupling a gear box with an engine of the vehicle and for mechanically uncoupling the gear box with the engine of the vehicle. The gear box includes an input shaft and a plurality of gears, which are fixedly coupled to each other for selectively coupling the input shaft with the output shaft. In the prior art transmission, a clutch

---

actuation system is used to engage and disengage the clutch to improve the performance of the vehicle. The clutch actuation system includes a hydraulic control system for controlling actuation of the clutch. The prior art transmission is typically configured to communicate the control of the hydraulic control system of the clutch actuation system to the ECU. The ECU controls the overall performance of the clutch actuation system in response to different driver inputs. The driver inputs may include an actuation of an accelerator pedal, a brake pedal and a clutch pedal. Typically, the ECU controls the hydraulic control system of the clutch by communicating with a pressure sensor that is operatively connected to the hydraulic control system. The ECU receives pressure signals from the pressure sensor for controlling the hydraulic control system of the clutch. The ECU controls a direction of flow of the hydraulic control system and a flow rate of the hydraulic control system. The ECU controls the pressure in the hydraulic control system of the clutch to provide an engagement range of the clutch. The engagement range of the clutch is in response
