You can download inexpensive image editing software for free from the Internet as well as buy expensive programs. The more you use a program, the more comfortable you become with its features. You can preview some image files before you edit them. If you're working on an image file, previews are helpful for checking that you haven't made any mistakes. Understanding Layers Photoshop uses layers to manage the content of an image. Layers are used in conjunction with the Photoshop file format to store pixels on a computer. Technically, the pixels are bits of color. Photoshop provides a way to change the look of a layer by removing, adding, and manipulating pixels. Layers are a key concept of the program. They provide an easy method for organizing the elements of a digital photo so that they can be manipulated in different ways. A layer also provides a way to edit and manipulate the elements of the layer above it. The Photoshop document for this project is shown in Figure 4-6. The image has three layers: 1. A background layer: The background has a completely different color than the striped pattern. 2. A pattern layer: The decorative pattern. 3. A layer below the pattern, which is used to hold the green screen image. The striped pattern is a pattern layer. The background layer holds the rest of the elements of the photo. The background layer is transparent, so it can be viewed through the pattern layer. The background layer helps you decide how much of the striped pattern is visible in the final image. The layers can be changed in any order. You can turn all layers on or off, or you can turn off a layer and reveal an underlying layer that's still on. FIGURE 4-6: Before you begin, look at the layers in the Photoshop file window. Correcting image problems If you're not careful with your colors, you can significantly degrade your image files. Color is a difficult subject to master. Color management tools can help you to achieve a better color balance. Don't believe the old saying "When in Rome, do as the Romans do." Your own personal preferences don't always apply. Learn how to take full advantage of the camera's built-in color settings and features to take better color pictures. If you decide later that you don't like the colors in the picture, don't be afraid to do some work on the image. You can always change the color scheme later

You can use a document or you can use a Photoshop document. In the artboards and menus of Photoshop Elements, there is a New Document option. This will allow you to create a new document. Q: In PHP how can I retrieve the sperator between an array of associative arrays? I have a simple, associative array: $data = ['foo' => ['bar' => 'foo', 'baz' => 'foo',], 'xxx' => ['yyy' => 'foo',],]; Which i want to iterate through and print out the "bar" key and it's value, with the following code: foreach($data as $key => $value) { echo $key.' => '.$value['bar']; } This prints out the following: foo => foo xxx => foo yyy => foo But I want the output to be like this: foo => foo foo => foo xxx => foo foo => foo because each of the arrays of the first element "foo" are separated by a "=>" equal sign. Any ideas? A: A foreach loop is very likely not the best way to do this. A more appropriate way of iterating this data structure would be to use the array functions array_column, array_map, and array_keys. A foreach is also an awful way to print the keys in an array, especially when the array is large. Use print_r() instead: ['bar' => 'foo', 'baz' => 'foo',], 'xxx' => ['yyy' => 'foo',],]; $result = array_map('array_column', $data); print_r($result); ?> Now we can easily access the foo array and determine if it's any different from the rest: $arr) { if($arr['foo']!= $arr['xxx']) { echo $key.' => '.$arr['foo']['bar']; } }

Wife of dissident Muslim Sushma Swaraj shares 'most difficult' year in politics Sushma Swaraj was granted a divorce on 19 April. She had married Manohar Lal Khattar, the BJP's chief minister of Haryana, on 20 May 1985. Despite her growing reputation as an administrative expert, she continues to show this side of herself in a variety of ways. She leaves early in the morning, suggesting she is keen to make her daily morning rounds. With her track record as a star lawyer, it's no surprise to us that Ms Swaraj makes an effort to visit as many sessions as possible. She plans well ahead for home meetings, staying through the night to watch out for her cases. For those who travel long distances, this may not be possible, but those who live closer should take note of how she keeps her schedule. Her office is well lit and she is known to be a great fan of open space. Our guess is that she does not want to be wrapped up in dust and surrounded by darkness. While the general public can get to meet her whenever she chooses to extend an appointment, and her office has a very well-lit entrance, for many of her supporters it can be difficult to catch a glimpse of her. She is on the phone while we have an informal meeting with her. One of her senior associates mumbles that her concentration is hampered by the minute distraction. She moves from her office with the determined step of an experienced politician. There's a noticeable bounce in her gait. She does not look like someone who has just recently been granted permission to leave the office early. When we ask if she is leaving early for her morning rounds, she says, "No, I have my morning rounds with the media, and I continue to work even after that". Ms Swaraj indicates that when she comes out of her office for a meeting or a television programme, she is subject to a lot of scrutiny. She wants to avoid this. The photo session is scheduled at 2 pm. Her aides are all aware of this. They stress on the need to be punctual. A few minutes later, all the photographers who have waited for hours to capture the moment have assembled, but Ms Swaraj has not yet arrived. No one is in the immediate vicinity
