* Photoshop CS5: `www.adobe.com/photoshop/html/cs5-primer.html` * Photoshop CS5: `www.adobe.com/photoshop/products/photoshop/tutorials/` * The majority of the Elements readers use Photoshop CS5 because it is the most stable and supported version. However, for the best experience with Photoshop, you should purchase the latest version of the product. ## Acrobat Adobe Reader is the _Reader_ version of Adobe Acrobat, and it has all the tools you need to edit documents, extract images, and add shapes to pages. Adobe Acrobat 8.0 is included with the current version of Elements, so this chapter covers the tools in that version of the product. You can also find free templates on the Internet for creating and editing books, brochures, or magazine layouts. There are thousands of templates available, so I'm not going to list every one in this book. If you aren't happy with the default templates, you can always start from scratch. You may or may not need to pay for these templates if you're creating a business card for your website. If you're expecting a one-shot job, I recommend that you stick with the free ones. On the other hand, if you're going to be printing a dozen copies, or creating several sets of business cards, it makes sense to buy a flat template in your desired format (such as 4 x 6 or 5 x 7). ## iPhoto Apple's iPhoto (`www.apple.com/itunes/photoshop.html`) is designed to organize and edit photos by events and categories. This program can also include the basics of photo collages and can place them on the Web. It can also sync them to iTunes where you can share them on the web, or stream them to Apple TVs and computers. You can also combine images from several photos together to get panoramas. The interface is clean and user friendly. It doesn't have the number of layers that Photoshop does and it doesn't offer any special layers for combining multiple photos, but it gives you the ability to resize the photos after you've placed them in a grid. You can easily create a digital scrapbook by adding photos into a project and organizing them into layouts. Elements does not offer all the features that iPhoto does, such as

The two-year-old software lets you perform a number of edits to your photos, including crop, adjust brightness, white balance and red-eye reduction. You can also resize the photo, apply special effects, such as the popular "cross process" effect, and create simple images in the form of collages, a time-saver. The software's simple interface makes the task of manipulating images easy, as you can only edit one image at a time. Adobe Photoshop is a desktop version of the software, which let you perform a number of photo editing tasks. It is the most common software for photographers and professional users. This model, which is designed to be used in the customer onboarding process, has been developed by a team of Facebook analytics experts located at Accenture's New York office. The Accenture team of experts, who are said to have access to both the live and historical data from Facebook pages, has used both the "engagement" and "like" measurement features of the social media site to assess the creditworthiness of prospective clients. It is based on the idea that having many Facebook Likes represents a positive sign of a company's reputation. It is therefore assumed that, by extension, having a negative reputation will correlate with a lack of Facebook Likes. According to Accenture, the following characteristics have been found to determine if a company has a positive or negative reputation: Number of Likes on the Facebook page relative to the company's overall page Likes Number of Likes on the company's latest status update Interaction with the company's Facebook Page Number of shares relative to the page's overall shares "Other companies have tried to use social signals to predict future performance, but this is the first one that takes a good look at history and actually does something with it," says the firm. Accenture has claimed that

foraging and honey bee season vary from year to year in the UK (Hill et al. [@CR35]). Further research is required to determine the diet of feral honey bees in the UK and to study their impact on the diet of wild bees. The sugar concentration in honey and honey-related products varies between honey products but generally is about 25–35 %, being much lower than in honey from managed honey bees. This is mostly due to the lower level of pollen in honey products compared to honey (Nunn [@CR63]; Hill et al. [@CR35]). However, pollen is a critical factor in the nutrition of wild bees for both nectar and pollen during summer (MacGregor [@CR55]). Higher levels of pollen and pollen products are available in the summer, especially in high-intensity flowering plants such as oilseed rape, which continues to flower until mid-August in some areas (Hill et al. [@CR35]). There is often a rapid change in the composition of pollen forages available as a result of the flowering patterns of particular flower species, which can affect the pollination service that bees provide and hence the availability of pollen for other bee species in late summer (Hubbell [@CR39]; Hill [@CR33]). For example, *L. perenne* dominates the pollen crop of the early flowering bumble bee, *Bombus pascuorum,* while *Trifolium pratense* is the main pollen forage for the late summer bumble bee, *B. lucorum* (Stevens et al. [@CR85]). Some honey products have up to 10% dry matter of pollen, such as *T. pratense* honey (Hill [@CR33]), which would be a good food resource for *B. lucorum* in the late summer in the UK. There are currently no investigations into the potential effect of such pollen on wild bee larval diets in the UK. The effects of honey bees and honey products on wild pollination services have been little studied. However, there is some evidence that in the UK, honey bees have had a positive effect on wild bees including solitary bees, bumblebees, and hoverflies (Schmid-Hempel [@CR79]; Lehane et al. [@CR49]). Honey bee colonies generally show a declining trend over the summer, and the decline in pollination services that bumblebee species provide is
