AllMyNotes Organizer is definitely worth checking out if you want a free.Environment Pakistan develops sound national policy to fight climate change KARACHI, Feb 26 - Pakistan's growing energy needs could soon trigger the development of a massive regional gas pipeline to link its two western provinces to the Indian Ocean, as its hard-pressed energy minister announced plans to construct a 400 megawatt (MW) solar park next to a coal-fired power plant at one of the world's largest coal-fired plants, to help meet its needs. During his visit to Islamabad yesterday to mark the end of his three-month visit to Germany, the minister, Waqar Ahmed Khan, said his country also wanted to expand its nuclear energy capacity. However, he told Pakistan's Dawn newspaper that the country remained committed to reducing its use of fossil fuels. "We must adhere to international climate change treaties," Khan said. "All our achievements must be graded according to the climate change aspect. We need to check if we are producing pollution in an environment which we cannot live in." Pakistan's increasing energy needs, coupled with the shrinking of its glaciers, have been pushing the country into ever increasing dependence on fossil fuel imports. The country hopes to build hydropower dams and link its western provinces to Pakistan's biggest coastal gas field, on the Arabian Sea, but major energy projects have been mired in debates over their environmental and public health impacts and rights over their resources. Only last week, the government shelved a plan for building two nuclear power plants in Sindh province as it considered a plan to involve a Russian company in the development of nuclear power. The government is also considering the possibility of developing an offshore gas field, after signing a deal to import liquefied natural gas (LNG) from Iran in the summer. Pakistan has long seen its southwestern province of Sindh as the largest prospective market for LNG, but industry officials have been lobbying for an offshore project, hoping to supply not only Sindh but also the rest of the country. The government has set an ambitious target of 5

[xn--rwzfawwyfupyfjcaifjgfdjgbdz.com] Follow the author of this article Follow the topics within this article Follow your favourite Non-Executive Directors At last the sun has reappeared. And so have all those Non-Executive directors who are generally best placed to understand the issues facing the Club. To be fair, first impressions count. Whether it's the reserve team coach, or a well-known and respected media figure, it's crucial you have somebody in the committee who can make a good first impression. A new season brings new challenges - a whole host of difficult decisions need to be made. There are new charges to defend, new players to acquire, contracts to be renewed and coaches to be hired. And this all has to happen while maintaining the overall ambitions of the club. For me, this is one of the hardest aspects of the club to manage. It is also one of the most rewarding. I try hard to remain objective, but without the support of my fellow Non-Executive Directors, I'd be in serious trouble. Their help has enabled me to make good decisions over the last few years, even though many will see those decisions as unpopular. However, the unpopular decisions are sometimes the best decisions. As well as the executives, we have a myriad of leaders and star players. Everybody has his or her idiosyncrasies and we need to respond to their personalities. That in itself is a huge challenge, as a team often feels the need to change its tactics when presented with different leadership styles. That's a big undertaking, as teams don't always respond well to change. But sometimes you have to make hard decisions because time is of the essence, and the right decision has to be made. Such is the challenge faced by Wilkins and his coaching team. They face a very tough test at home to Brighton this Saturday, before facing Arsenal away in the FA Cup. Wilkins has two real options. The first is to bring back ex-managers Koeman and Pep Guardiola. From the outside they sound as if they would be a perfect fit - they've

come from successful managers who have had time to settle into the job. But I'm not sure either of them would be suitable in today's football environment. Both Koeman and Guardiola have massive egos and are not typical of the present
