SyncThru Web Admin Service For SCX-4828FN (April-2022)

It provides web services for central management of all the devices on the centralized network. It includes SNMP management, which can discover, manage, and report all Samsung devices on the

network. Users can also directly access embedded SyncThru Web Service in individual devices. SNMP-compliant devices from other vendors can be discovered and managed. SyncThru Device Management is a central management console which provides a secure, browser-based access to devices on a network and lets users manage all the Samsung devices on the network directly from the browser. Users can search for the device or any other device and view the information about that device, change settings (such as IP address, home network/default gateway, user name, and password), and reset the device. Users can also remotely access the device via web interface. The device settings configured by SyncThru Device Management are applied to all the connected Samsung devices. You can use SyncThru Device Management to view the following information for devices on a network: Device name Device model IP address Device type Current connection status Network connection status Last connection time Last login time SNMP-compliant devices can be discovered, listed and managed by SyncThru Device Management. You can view detailed information about the device, change settings, and reset the device. You can also use SyncThru Device Management to remotely access the device via the web interface. The device settings configured by SyncThru Device Management are applied to all the connected Samsung devices. The Data, Display and Management tabs provide access to the device information and settings. You can manage other devices from the Controller tab. The Controller tab provides a web-based interface to configure, restart, and delete devices on the network. Users can set the device connection modes, and view and set the device status. Monitor and Configure a Specific Device: It allows a system administrator to monitor and configure the devices on the network. From the parent and child tabs, one can view the detailed information, list, or delete the devices. View the Parent and Child Devices: From the Parent and Child tabs, one can view the devices on the network and the details of the parent and child devices. From the Storage tab, one can view the storage information for the specified device on the network. Delete a Device from the Parent and Child Devices: From the Parent and Child tabs, one can delete the specified device from the parent and child devices. Change a Device Connection Mode
