A few months ago, I received a press release regarding FIFA 20's new gameplay focus. To make a long story short, the gameplay in FIFA 20 will be powered by a new physics engine dubbed "Next-Gen". That's the most important part of the whole press release. The other "substance" is that the game will introduce new acceleration, speed, momentum and reactive controls. To put it in the words of those who have been following the news, this is a "complete reboot of the game." It's kind of strange to witness such a dramatic change in an EA sports game which had a good reputation and was quite popular since the early '00s. How does FIFA 20 benefit from this new engine? The answer is simple. New advances in the physics engine will allow the developers to make a more accurate prediction of where players and balls will go in the future. The net result will be cleaner, more dynamic gameplay which should be preferred by players. On the other hand, the more we try to understand how these new advances work, the more we realise how limited the knowledge is. To know more about how the game comes to its results, I decided to talk to multiple people involved in the development process. The first one is Georgesteller, who is a senior engine programmer at EA on FIFA 20. His role is important because he contributed to the new physics engine, so he had an eye on what was going on. Since he shares an office with a senior game designer, he was able to shed some light on how their ideas and thoughts influenced the work on FIFA 20's new engine. Concerning gameplay First of all, I focused on how they use their new engine in the creation of FIFA 20. They're using it for the lighting, collision, animations and animations transitions, which are an important part of the gameplay. More specifically, I asked Georgesteller if he could share his vision of gameplay. This is what he had to say: "The main topic that we wanted to achieve with this engine was to solve some of the problems that we always had in the FIFA engine, where the physics wasn't accurate enough. For example, if you run with a ball, you'd want to control where you'd want to go, and you always wanted to go to a specific direction. With the old engine, you could control

## **What's new in Fifa 22:**

- **Career mode:**
  - **Select your team: Create your team anywhere in the world. Your job will be made easier by the new Fabregas Creator, which gives you the freedom to pick your favourite player’s strengths and weaknesses.**
  - **Share with your friends: Tap the Friends icon in the main menu, and choose the club you want to invite to the party.**
  - **Play against your friends: FIFA 22 gives you the ability to invite your friends to play in one of four different modes: All-star, Swiss, All-play All, and Random. Choose from a specific competition winner or a random club to find out who are amongst the best.**
- **Dual-screen mode:**

**FIFA 20 was the last PS4 exclusive to feature two screens, which were far less powerful than the dual screen modes in FIFA-series exclusive Home, Away, Online, and 2K modes. A far cry from having both a TV and a mobile screen on the back, these modes were two sides of the same story, and the new configuration for FIFA 22 puts the handheld screen on the back again. This time, FIFA 22 gives you the option of playing first-person soccer on the controller, which is much more immersive than the last iteration.**

## **FIFA Ultimate Team:**

- 
- **The game's champions have taken flight, and a flight they did. Since its inclusion in FIFA 20, the champions series has gone from being the standard bearers for the game and the series to being one of the franchise's most innovative and exciting characteristics.**
  - **Record-setting teams:**
    - **The best clubs in the world today have assembled to create the best team of our generation.**
    - **The highly flexible MyClub gives you control of your team to the exact, editable vision of its players you desire, and fresh new content keeps unlocking.**
