Follow your friends and watch live streams by popular broadcasters to stay updated on what's happening right now.

Q: Android activity how to get a view in other activity I am beginner to android development, in my question I will try to explain my problem: I have two android apps/activities they are: app1: it displays a listview and some informations, the information that I want to display in app2 is the url of the image when the user click on the image I want the application 2 to start and show the image, it should be in the view provided by app2. I do not have a lot experience in android I know that I can do that easily with a webview, but I want to do that in my activity if possible I also tried something simple and did this:

```
public class MainActivity
    extends AppCompatActivity { @Override protected void onCreate(Bundle
        savedInstanceState) { super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main); findViewById(R.id.mainButton); }
    public void onclick(View view){ Intent intent = new Intent(MainActivity.this,
        Sample.class); intent.putExtra("imageToDisplay", "URL"); startActivity(intent); } }
    and public class Sample extends AppCompatActivity { public View
        mMainContentView; String imageUrl; public String imageTo b7e8fdf5c8
```

## Zoom Lens With Serial Key PC/Windows

Using the application, click 'Next' to zoom in on the website you wish to visit or click 'Done' to zoom out, close the window. Page previews should fit the page exactly, and not just be a guide. Use slider icons to zoom, the application will zoom with you. Zoom in and out with mouse buttons or keyboard keys. Customize a magnification level and a size of the lens. Page magnification is optimized for specific websites. One click to switch between multiple magnification views. No need to load the page first, just choose a magnification level. Manage a transparency of the magnification area on screen. High, low, or null transparency is supported. If the visibility of the page exceeds the percentage of transparency, it will be magnified. Set a timeout to close the application after a particular duration of mouse focus. Zoom Lens Latest Version: Zoom Lens Free Download Visit Post for Latest Version 2020. Visit now Zoom Lens Latest Version: Zoom Lens is a magnifying glass: magnify what you want to see on your screen, and it will let you see better on your monitor. The custom-built lens can be found on a tiny flash drive, ready to be used on the go. It can be configured to block unwanted content, such as ads, or to zoom only the websites you wish to view. To start using Zoom Lens, simply download the application on a USB flash drive and place it on your monitor or laptop. Open the program and click Next, adjust and zoom as you please; you can even customize the window width. By clicking 'Done' the current magnification will disappear, but you can start again if you so wish. If what you're watching on your monitor is too small for your viewing pleasure, simply click 'Next' and the application will magnify the page for you. You can also change the width of the magnification window and the zoom level. Zoom Lens Latest Version: When finished, you can click on 'Done' to keep the current magnification level, or click 'Save' to save the current level as a file for later use. The smaller the file, the better, but Zoom Lens keeps a small one even if you're saving multiple magnifications, so use them wisely.

## What's New In Zoom Lens?

Images get larger or smaller as you zoom in and out. Zoom Lens provides a full real-time picture in your browser window, and you can save an image of the enlarged region for later use. Save your current picture as a temporary file or a JPEG, and save a picture of an enlarged region as a JPEG, PNG or BMP. The region you wish to enlarge can be moved around, to fit your screen. Zoom Lens Features :

- Zoom in and out of a picture by sliding a slider.
- Zoom in and out over all of the picture, or just the area you want to enlarge.
- Change the zoom ratio: 1x, 2x, 3x, 4x, 5x, 6x or 10x.
- Make the picture square or portrait.
- Save all images in different formats for different uses.
- Rotate and flip your image without using any extra tools.
- Move the enlarged region around the page to fit your screen.
- Change picture transparency.
- Save and load a picture from the browser as a temporary file, a
