of related. Xenia Space Center, U. S. Agencies, and Industry Donate Years of Spaceflight Experience  
and Technology to NASA and The mission of NASA's National Space Transportation System ( NSTS )  
is to ensure that the U. S. becomes the world's preeminent spacefaring nation. To achieve this goal,  
NASA is fostering and investing in innovative technology and commercial innovation to reduce the  
risk of human spaceflight, which is a critical element in the reduction of the cost of spaceflight.  
NASA's Federal partnerships with academic and commercial groups have contributed to the  
significant reductions in the development time and costs of space systems, reducing the costs and  
risks of spaceflight for the next generation of entrepreneurs. The Center for Commercial Space  
Transportation ( CCST ) at George Washington University has three main lines of research and  
development: development of a " first-ever public-private partnership between the Federal  
Government and private industry," which will include innovative approaches to gaining market  
access to the International Space Station ( ISS ); construction and modification of the ISS
